

GCG EASY PRO

Concealed, high use, pedestrian gate closer (with individual hydraulic controls for closing & latching speeds)

The Easy Pro pedestrian gate closer is an all-in-one closer and hinge system which is designed for installation on high use gates.

With the closer unit concealed inside a strong steel housing, the Easy Pro is tamper and vandal resistant.

Installation of the Easy Pro is normally done when the gate is being fabricated, but can be done afterwards, if required. The closer housing and bottom support are welded to the bottom of the gate and post, and the closer top pivot is welded to the top of the post. When the closer housing, bottom support and top pivot are welded to the gate and post, they can be galvanized/painted along with the gate and posts.

Whether the closer is for use with a lock, latch or electromagnet, the two hydraulically controlled speed adjustments will give the correct closing speed. There is one control to adjust the closing speed, the other regulates the latching speed. Both controls are hidden underneath the gate closer housing and can be easily adjusted with an Allen key.

The gate closer housing includes a mechanical stop which restricts the opening of the gate to avoid damaging the closer. The closer can be set for right or left hand without any additional parts or fabrication work.

Limited maintenance is required, only regular gate inspection and periodic lubrication.

Features

- Fits gates 1.0 - 1.2m wide & up to 2.0m high
- Suitable for gate weight up to 110kg
- No hold open (suitable for security gates)
- Hydraulically adjustable closing speed
- Hydraulically adjustable latching speed
- Includes stop to avoid over opening
- Speed adjustments hidden from view
- For all temperatures down to -40°C
