

Locinox - Standard Gate Lock (for residential and commercial gates)

This well proven lock range suits both residential and commercial gate applications.

The Locinox standard lock is easy to install and requires no welding of any parts. Its aluminium lock case and stainless steel lock parts ensure a rust free life - not rusting from the inside, or outside.

A strong tamper proof construction provides superior levels of security and decreases the likelihood of damage to the lock. All fixing screws are only accessible when gate is open, discouraging theft of the lock. Both latch bolt and deadbolt projection are adjustable without removing the lock case making final adjustment really easy.

It is available in three colours, silver, black or green. Three models are offered to fit gate frame profiles: 10-20 mm solid bar, 30-50mm box section and 40-60mm box section. The next page gives full details for ordering.

Each lock comes with two handles, a lock keep, fixing screws and three keys. We also provide a drawing giving drilling hole sizes and hole positions.
