

Z-Lokk - Magnetic Latching Gate Lock

The stylish Z-Lokk™ magnetic latching key lockable gate lock is an ideal choice of lock for metal security gates.

Its easy install design only requires holes to be drilled for fixing screws. During and after installation, the Z-Lokk™ is adjustable ½" (13mm) vertically and horizontally, accommodating seasonal post movement and gate sag.

Made from tough engineering polymers, and quality stainless steel components, Z-Lokk™ will not rust or stain.

Z-Lokk™ is available in two models, one to fit gate frames between 1" - 1 5/8" (25-41mm) and a longer bodied model to fit gate frames between 1 3/4" - 2 1/2" (44-63mm). Each lock comes with a selection of spacers to accommodate different sized gate frames.

This style of lock is suitable for metal security gates, including machinery and storage area cages.

Note: It is not suitable for child safety gates as its design is not a safety design.

Technical Overview

Magnetically triggered latching

No special tools required to fit

45° turn of handle to unlatch

Will latch in the "locked" position

Operates and locks from both sides

Adjusts horizontally and vertically

Can be re-keyed to match other D&D products

Fits left or right hand gates

Black engineering polymer body

Ordering Information

Gatelock006 - ZL1 frames up to 1 5/8" (41mm)

Gatelock007 - ZL2 frames up to 2 1/2" (64mm)
